EXIGENT

VeraciMail

Protect your business communications with spam filtering and email security

Keep your most important business communications tool running safely and smoothly

While email remains one of the most efficient and cost-effective means of communicating, it is also incredibly insecure. The ever-increasing number of social engineering attempts, ransomware attacks, spam, and viruses demand sophisticated protection for your email.

VeraciMail, our managed spam filtering and email security service, mitigates the risks of spam and threatening content, preventing threats from reaching your inbox and eliminating the headaches, wasted time, and dangers of unsolicited email.

You won't miss an important email—at least not because of system failure—since you can access 30 days of company email even during infrastructure or email provider outages. Plus, because it's an Exigent managed solution, there's no hardware or software to buy, no fine-tuning, and no hassles. We handle it all for you.

Email Threat Protection

VeraciMail provides multilayered protection against ransomware, phishing, impersonation, spoofing, and spam for both inbound and outbound emails, supported by real-time threat analysts, automated traffic analysis, and machine learning.
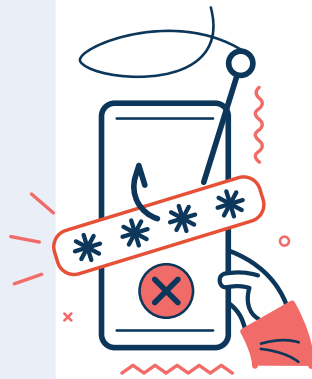

Virus filtering

Each message is scanned for malicious content before it ever makes it past your firewall or to your inbox, providing great security for your entire network by closing the door on potential breaches.

THE STATS

Industry research states that **48%** of emails sent in 2022 were spam, with the average employee bombarded by **13** spam messages a day

Cybersecurity statistics from Verizon reveal **82%** of data breaches involve a human element, including phishing and the use of stolen credentials

75% of global IT executives say they've suffered phishing attacks:

37% suffered downtime lasting more than a day

19% had to pay legal or regulatory fines

37% suffered exposure of data

32% lost productivity
